

# MHPS Joins the Terex Global Intranet

It is a great pleasure to announce that our newest business segment -- Material Handling & Port Solutions -- is about to begin its migration to the Terex Global Intranet. Here is what you will see going forward:

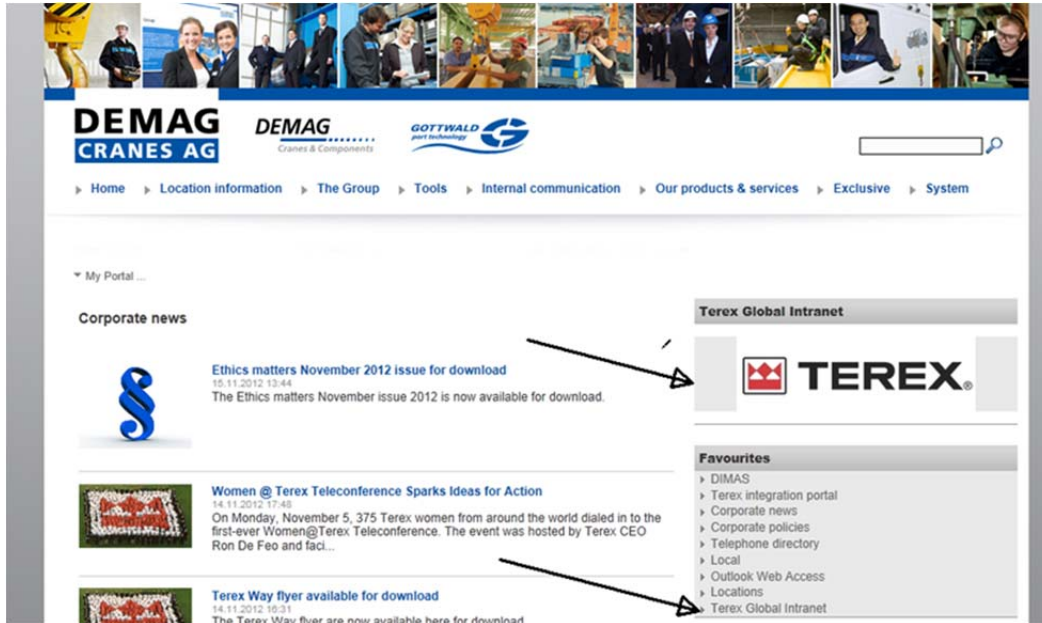

1. **On Tuesday, November 27**, the current MHPS intranet will be accessible as a segment dropdown option on the Terex Global Intranet home page, in addition to AWP, Construction, Cranes and Materials Processing. The MHPS section is currently accessible in German and English (only).

The screenshot shows the Terex Global Intranet home page. A red arrow points to the 'Segments' dropdown menu, which is open and shows 'MHPS' as a new option alongside 'AWP', 'Construction', 'Cranes', and 'Materials Processing'. The page features a navigation bar, a search box, and various content sections including a video player, a news article titled 'Women @ Terex Teleconference Sparks Ideas for Action', a stock price widget for Terex Corporation (TEX) showing a price of 22.55 and a +5.57% change, and a 'News Around Terex' section with links to various business segments.

Terex locations that receive their intranet in German will automatically access the MHPS intranet in German; locations that receive their intranet in English or any other Intranet-provided language will access the MHPS intranet in English.

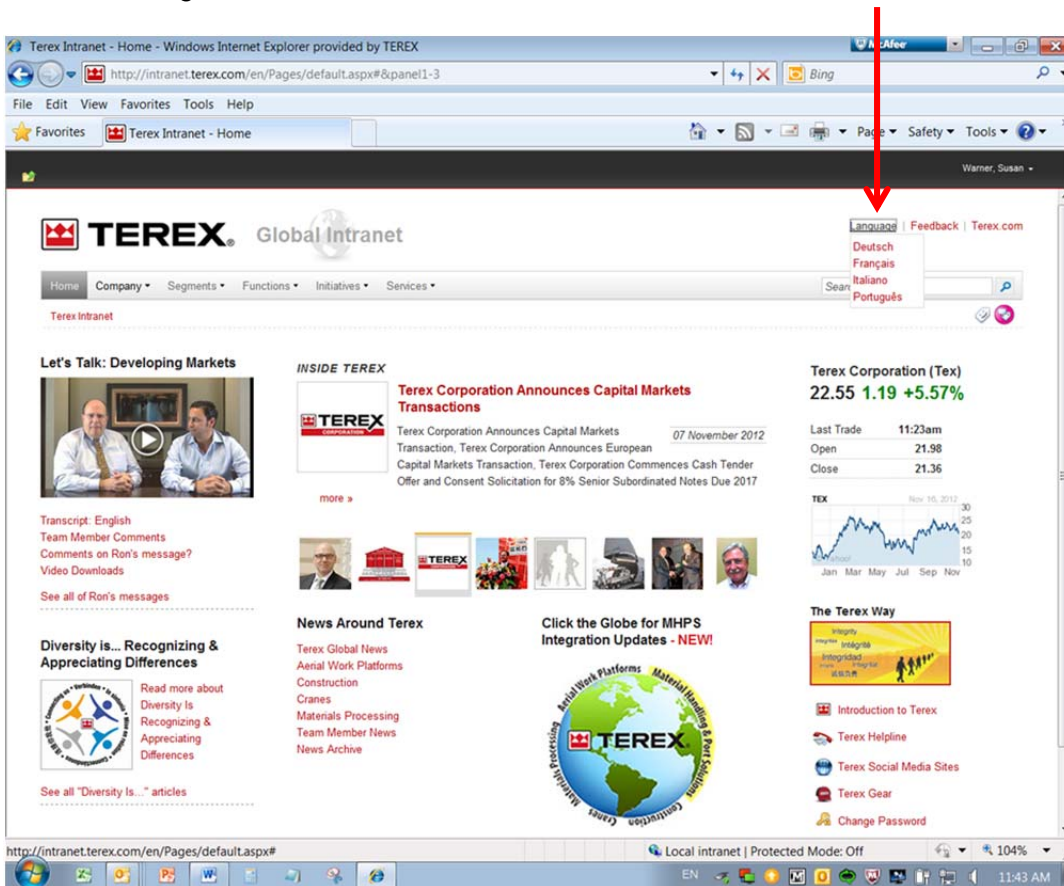

Over time, MHPS will migrate to a “look and feel” that is similar to the Terex Global Intranet.

2. Also on November 27, MHPS team members will be able to connect directly to the Terex Global Intranet, by selecting a link on their home page.

Locations that receive their intranet in German will automatically access the Terex Global Intranet in German; locations that receive their intranet in English, will access the Terex Global Intranet in English.

Options are available on the Terex Intranet home page for all team members to manually select the following additional languages: French, Italian and Brazilian Portuguese -- in addition to English and German.

3. **In the coming months**, the Terex Global Intranet will become the default website for all MHPS team members when they log on to the Internet, as it is for all other Terex team members globally. The MHPS section will still be accessible per above on the Terex Global Intranet home page. More to follow on this new feature.
4. **Early next year**, MHPS team members will see The Terex Screen Saver appear when they have been away from their computers for 30 minutes. The screensaver alternates between the Terex Vision and the values of The Terex Way. The screen saver -- in use throughout the rest of Terex for the past year -- is both a branding reminder and a security feature: to re-enter your desktop after the screen saver appears, you will log on once again, using your regular logon credentials.

We are happy to welcome our MHPS colleagues to the Terex Global Intranet, and encourage them to explore and discover the many features that are available to you. All other team members are encouraged to explore the MHPS intranet to gain a fuller overview of our newest business segment.

Please submit any questions about this migration to [Intranet@Terex.com](mailto:Intranet@Terex.com).
